### Lambing Time Reminders

**Average lambing mortality in the UK is 15%**

**In a 500 ewe lowland flock where 900 lambs are born (180%), the 135 lambs that die represent a potential loss of £10,125 income (at £75.00 each)**

**How can this be reduced?**

The target should be 5% lambing mortality or less.

Unlike us humans, no immunity is passed from the ewe to the lamb before birth. So newborn lambs are born completely vulnerable to disease – which is why so many of them die.

The two critical factors in reducing this disease risk are disinfection & colostrum.

#### **Disinfection**

Bacti-Bed granular disinfectant is ideal for lambing sheds & pens. Very safe to operators & animals when sprinkled onto bedding

Exceptional & powerful drying capacity – 1kg Bacti-Bed has the equivalent capacity of 16kg of lime

Broad spectrum – bacteria, virus & fungi

#### **Colostrum**

A stomach full of colostrum within 2 hours birth makes the difference between life and death for lambs. It is their only source of disease resistance.

Colostrum provides energy to protect the lamb from cold and immunoglobulins (antibodies) to help resistance to some diseases (including watery mouth)

We have a good range of colostrums that mix easily and provide lambs with this vital lifeline.

See #ColostrumIsGold

#### **Lamb Boost**

- It's got Energy
- It's got Egg Protein to support the lambs immune system
- It's got Prebiotics to help gut flora & support the good rumen bugs

All to give a baby lamb that extra help providing protection when lambs need it most.

#### **Lambing Accessories**

Make sure your Lambing First Aid kit is well stocked this year – speak to us or call in for good advice and the best products to fill it. **After all – saving lambs has never been more important.**

Give them the best start in life

### Job Vacancy R M Jones—Warehouse/Shop Assistant

We are looking for a new member to join our team in Hereford.....

Our new colleague would be self-motivated friendly, hard-working and able to do some heavy lifting. A good knowledge of agriculture would be preferred.

#### Hours

Mondays & Wednesdays 8.30 -5.00

Every other Thursday 8.30 - 5.00 (only on cattle sale days!!)

Every Saturday 9-12

Please apply by email to [hereford@rmjones.com](mailto:hereford@rmjones.com) with cv

## Look after your Sheep with Sheep Natural Energy buckets

**Sheep Natural Energy** is a specially formulated feed bucket to be fed to ewes when extra energy and micronutrients are required. Feed throughout pregnancy and pre-post lambing to maintain ewe health and condition. And after all the rain we have had this is really needed.

Its unique formulation includes Omega 3 fish oils and protected fats along with sugars to give her an energy boost when she needs it most. Quality protein sources are used to meet the demands of the growing lamb and ensure excellent milk quality and supply at lambing.

### Top 4 reasons why you should use Sheep Natural Energy

- Nutrient dense lick complete with all minerals and vitamins for healthy ewes
- Balances forages and grazing, making it a cost effective alternative to bought in feeds
- Easy to use and convenient
- Contains variety of energy sources ideal to meet the demands of the ewe nearer lambing

#### **NOW STOCKING**

#### **HOOK OVER HAY RACKS FOR LAMBING PENS**

- PREVENT WASTAGE OF HAY
- PRACTICAL AND EASILY DROPS DOWN ONTO STANDARD HURDLES

## Essential Growing Cattle + Bolus

Essential Growing Cattle Plus has been specifically designed for growing cattle over 9 weeks of age and between 200 and 400kgs, It delivers the animal's complete recommended daily requirements of Copper, Selenium, Cobalt & Iodine for a full 6 months and is a One bolus dose.

After weaning the animal loses its supply of trace elements via mother's milk and has to obtain these from fodder or hard feed. It takes up to a month for the rumen to adjust to a change of diet so it is vital that the animal is properly supplemented to maintain its health and growth. A deficiency of trace elements can seriously affect weight gain.

**Essential Growing Cattle + will ensure each animal is supplemented all day, every day for a full 6 months therefore eliminating intake issues. Great value at £4.75 per dose = 2.6 pence per day**

Can be used at the same time as drenching, injecting or pour ons.

**Ledbury Farmcentre closed for lunch 12.30-1.00pm**

## Protect your Cattle from Blackleg & other Clostridial Diseases

*The wide range of Clostridial diseases are as much of a threat to cattle as they are to sheep and are probably the cause of a large proportion of the unexplained sudden livestock deaths that most farmers experience.*

*Clostridial disease in cattle is being more widely reported as a cause of sudden deaths*

*Vaccination is cheap & effective, please talk to us about product choice & timing*
